A board human protoin (R9954) that induces interferon-gamma (FN samma) produce by immunocompetent cells is the product of a class what clone (T241) derived from a human liver library.

FY sumplification of the cDNA (see also T2400-10) and expression in Escherichia coil XL-1 Rive MRF/Kan allowed produced argument thereof protoin. This was used to construct hybridoma H-1, which produced anti-IFM damma inducer protein monoclonal antibody H-ImAh (sector) in the detection and purification of the inducer protein sector.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (HAVE ) HAVASHIPAKA SELWUSH KAMAKU. Assumblinate [FR-Jamma Induced protein can be produced in third yields using host cells, esp. Escherichia cell, transformed with a vector carrying the encoding cDNA (T22402). It is issued as an antiviral, antitumor, antibacterial, immunorequiation and become platelet enhancing agent, and can be used in adoptive immunotherapy. It is also used to raise monoclonal antibodies. A full-length sequence is given in R99866.
                                                                                                                                                                                                                                                                                                                                       Example A-3-2: Page 36-37: 48pp: English.

A novel mouse protein (R3955) induces interferon damma (ifficialization produced from produced from the produced from the sequence was deduced from that of a cDNA clone (T32403) isolated from a mouse liver jibrary. Recombinant IFN-gamma inducer protein can be produced in high yields using host cells, esp. Escherichia coli, transformed with a vector coline transformed with a vector colline transformed with transformed with transformed with transforme
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Eukuda's, Kohno K, Kunikata T, Kur

Page 41-42, 48pp; English, protein (p2955) indices interferon gamma (IFN gamma) profus by immunocompetent cells. Interferon gamma (IFN gamma) profus by immunocompetent cells is the product of a cona clone (T22404) obtd. from a human liver library. The protein enhances the cytotoxicity of killer cells and/or induces the formation of killer cells. (e.g. NE cells, and/or induces the formation of killer cells and cytotoxic T-cells) lymphorino-ortivating killer (LAK) cells, and cytotoxic T-cells) The mature protein (see also R99558) is useful as an antiviral, antitumor, antiborterial, immunoricydiatory and blood platelet enhancing agent and can be used in adoptive immunotherapy. It also used to raise monoclonal antibodies
N\text{-}PSDB\text{-}\ TEC210 . A drug containing a polypeptide which induces interferon-gamma
                                                                                                                                                                                                                                                                                                                                                                                                    Murine protein for induction of interferon-gamma. Interferon jamma immunecompotent roll, malignant tumour, viral disease, bacterial infection; immune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (HAVE ) HAYASHIRAMA SEIBUTSU KAGAKU.

this is the protein sequence of interferon gamma inducing factor-2 (1918). As PERSON against (W31757) and an IGIF variant (W22049), which may be an alternate transcript, also exist. Probes derived from the color as equences can be used to quantify the expression of PERSON in which can be used to quantify the expression of the expression of PERSON and that are associated with inflammation or aberrant expression of PERSON protein can be used to screen for compounds that the enterministic contacts an indicate the expression of the protein can be used to screen for compounds that the enterministic compounds or antibodies, antagonists or other unline loss (expression of the protein can also be used to diagnose, previous to the protein can also be used to diagnose, previous transfer and the diagnose previous contacts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Has previous sequence represents an interferon gamma inducing tactor-2 (1952) until sequence in the form a liver cDNA library. This sequence striets in the form a T-lymphocyte cDNA library (M22047), the first sequence striets in the form a first sequence striet sequence striets. As a second to be changed from Arg to Ile. A second variant, all 41 is so mais's probes degrees of IGFF-2 in conditions that are used to quantify the expression of IGFF-2 in conditions that are used to death inflammation of abertain expression of IGFF-2 are probes to used to screen for compounds that interact with IHE 2, into an antibodies, antagonists or other inhibitors (especially inform a subject of sequences) of IGFF-2 expression or artifity. The following sequences of IGFF-2 expression or artifity the strict is set in a discussion of diagnose, properties that IGFF-2 induction of problems in the strict in the sequences.

Of the present sequence represents a novel protein from mouse liver cells. The present sequence represents a novel protein from mouse liver cells. This pictein enhances cytotoxicity of killer cells and induces their formation. It is used as an antimorbly of killer cells and induces of their formation. It is used as an antimorbly and attitudes of antihorterial agent for antihorterial agent manufacture, and in the treatment of atopic or immune system diseases, e.g. asthmus hayfever or incondition. When formationed with interleakin-3, it is also used to treat leakapenia and threetocytepaguia as conducted with control of the protect sequences. When used in attitudeour immunetherapy of leukaemia and other concers. When used in attitudeour immunetherapy this nevel protects sequences, e.g. attitudes of interleakin-2 (IT 2) compared with associated with administration of ILL2) or by addition to the patient (before administration of ILL2) or by addition to the module in which cells sequence 157 AA:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match 100.0%;

The protein is the human equivalent of a mease synthic. ISIT which induses service T calls by produce the incleated level and and moves fold show IIN identity at the nucleated level and approximately 55% identity at the anion and level. Antagonists of IIningamma, e.g. antibodies, can be used in a method for treating a condition caused by human IIningamma. The antibodies can also be used in diagnostic assays, the IIningamma protein can be coralently and protein used in a pharmaceutical composition for supplying the fusion protein used in a pharmaceutical composition for supplying the fusion the human IIIningamma protein (and the protein displays that can be coraled using the human IIIningamma protein (and be invanily of IIningamma, conditions that can be received using the human IIIningamma protein (and be invanily) and the protein of the protein of its receptor.

As it is expressed in ian cells i also has low texicity when used in human and colors is also the cells. The favorable protein use is near the ray, e.g. by injecting vectors containing a cells in the cells of the cells of the cells.

This sequence represents the precursor of an interferon-gamma (IEN-gamma) inducing polypeptide. The polypeptide induces IEN-gamma production in immunocompetent cells (the polypeptide induces IEN-gamma production into 12 27199,96 and 19209,96). An enzyme can convert this precursor form into its active form by cleaving a linkage between Asp at amino acid position 36 and Tyr at amile acid position 35 tells without the convert and can be obtained from a human harmatepointh cell and can be inhibited by induce tamile and acetyl introsyme can be used for cleaving a recombinant IEN gamma pro polypeptide to form a mature polypeptide.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             At VIII and April

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Planologich, R.: Plagons, H.: Herrmann, R.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  OALLINE STR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Hillory, H.: Piatens, H.: Pirkl.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                0;                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Conservative

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Endels DR N.ESSA. 192506.

PT Protein that induces games interferen products limitation potent profils used a graph satisfact and the most agent also induces profils. Used a graph and interferent agent also induces profils. Sequence represents the interferent jamma (IENJamma) induces profils sequence to this protein is useful as an antiviral, of the invention in this protein is useful as an antiviral, and thomost, artisepile, immunocompetent cells. The protein is useful as an antiviral, and the most force of the invention in the protein of immunocompetent cells. The protein is useful as an antiviral, and the new force of invention of artisepile, immunocompetent cells. The protein or preventing AIDS, condylona dominatum, of indices of fermion or protein can also be used to induce IPNAMMA production in the cells and when used with intersection in the protein can also be used to induce IPNAMMA production in the cells and when used with intersection in the cells and the cells are incompeted with intersection in the cells and the cells are incompeted and the cells are produced and intersection in the cells and the cells are incompeted and interest of the cells and the cells. The branch is sequence can be used to induce the protein assayed, sequence 157 AA:

Interferen gamma freduction inducer protein.
Interferen gamma; inducer; IFNgamma; immunocompetent call; antiviral;
antitumour; antiseptic; immunoregulatory; platelet increasing agent;
therapy; prevention, condyloma adumination, recal cancer; brain cancer;
granuloma; mycosis funcoides, rheumatism; allergy; cytotoxicity; AIDS;
Liller Toull interfeuelling; conceinnal antibody.

Mus musculus.

Recombinant IFN gamma inducet protein can be produced in high yields using host cells, esp. Escherichia coli, transformed with a wester carrying the enceding cDNA (T32402). It is useful as an antiviral, antitumor, antibacterial, immunorogulatory and blood platelet enhancing agent, and can be used in adoptive immunotherapy. It is also used to raise monoclonal antibodies. A full-length sequence is given in R99560.
                                                                                                                                                                                       A novel mouse protein (R9959) induces interferon-gamma (JEN-gamma) prodn. by immunocompetent cells. Its sequence was deduced from that of a cDNA clone (T32403) isolated from a mouse liver library. Recombinant IFN-gamma inducer protein can be profuced in high yields using host oralls, esp. Fschorichia coli, transformed with a rector carriers.

MR3 Winters (WSC02) is a fusion protein composed of bushan syelin basic protein (MRP) foetal isoform MRP21.5 (see also W00296) and delta PIPA (W00400), a proteclipid protein (PEP) matein that lacks hydrophobic domains 1.3 and 4 of native human PLP (W06106) but includes PLP aptropes associated with multiple sciences (MS). It can be expressed in a coll transformants using a DNA construct (T4182) world. The MR21 will be seen fisher M23 while the map of the Can be expressed in a coll transformants will a DNA construct (T4182) world. The MR21 is delta ELP3 game fisher M23 while the M21 will be seen useful for the clinical assessment, diagnosis and treatment are useful for the clinical assessment, diagnosis and treatment

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 34: Page [10-112] 155pp; English.

MM4 chimera (WÜNIDS) is a fusion protein composed of human myolin busic protein (MBP) foetal isofouth MBP21.5 (see also WD0399) and delta PLP4 (WO6101) a proteinigh protein (PLP) mutain that larks all 4 hydrophobic domains of native human PLP (WÖ6105) but includes PLP epitopes associated with multiple solor sis (M5). It can be expressed in E roll transformants using a NNA construct (T1893) coutq, the MBP21.5 delta FLP4 were fusion. MP4 chicora and other size in the MBP21.5 delta FLP4 were fusion. MP4 chicora are useful for the clinical assessment, diagnosis and treatment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        01-FEB-1997 (first entry)

DM4 Chimera (delta PLP4-MBP21.5 fusion).

(M05101) and MB215 (M0399). Delta PLP4 is a proteolipid protein (M05101) and MB215 (M0399). Delta PLP4 is a proteolipid protein (PLP) mutch that lacks all 4 hydrophobic domains of native human PLP (M05106) but includes PLP epitopes associated with muttiple sclorests (MS). MP01 is a froctal inform of human myolib basic fittels (MS). MP01 is a froctal inform of human myolib basic fittels (MS). MP01 is a froctal inform of human myolib basic state (MS). M05103). It can be expressed in bacterial bat sclls using a lNA construct (M1894). PLP polypeptides (see also W0440), Wollin on and World') van tersend in the collicial assessment, diagnosis and treatment of MS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New ElectropyClt lastings told and growelly in proticused in the agreesment. This increases produce the MBP in E. coli by at least for. Recombinant MBP 21.5 polypeptides (see also W00494 and W06108) are useful in the clinical assessment, diagnosis and treatment of MS.
